DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States
- 2. Claims 1-2, 6-9, 10-16, and 25-29 are rejected under 35 U.S.C. 102(b) as being anticipated by Focke (US 4,953,711).

Focke discloses a method and apparatus for selecting and feeding via at least one channel articles to containers from a hopper comprising auxiliary hopper 25; main hopper 26; selecting means 17 with sensors 30 for stopping and removing defective (non-size matching articles); chute 19; shutter 36/37 see figures 3-4. Focke also discloses sensors 21-22 for detecting flow of articles.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Focke (US 4,953,711).

Focke does not directly disclose hinged shutters for removing the non-size matching articles however the examiner takes OFFICIAL NOTICE that it would have been obvious to one of ordinary skill in the art to use a hinged shutter on the tapered section for allowing for axial removal of the defects.

5. Claims 1-19, 22, 24-27, and 29 are rejected under 35 U.S.C. 102(b) as being anticipated by Archer et al. (US 5,522,512) in view of Soloman (US 5,369,940).

Archer discloses a method and apparatus for selecting and feeding via at least one channel articles to containers from a hopper comprising auxiliary hopper 101; to main hopper 47; selecting means 107 with sensors 27 and 29 for stopping and removing defective (non-size matching articles); multiple chutes; vibratory inclined feeder 103 and 105; see figures 7-8. Selecting means also comprises tapered sections, tubular portions; shutters 65' 63'; see figures 8-10. Sensors 55 detect flow of articles.

Archer does not directly disclose stopping defects but rather diverting them.

Soloman teaches tapered tubular guide in vibratory feeder for discriminating between uneven sizes of articles 16 and actuating hinged shutter/deflector 54 by pneumatic cylinder 54 or rotating inner guide leg 84; see figure 8.

Conclusion

- 6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher R Harmon whose telephone number is

Application/Control Number: 10/616,642 Page 4
